Tokyo, Japan | Dual British / Polish Citizen | radoslawkosminski@hotmail.co.uk | +81 70 1269 3844

Senior AWS Serverless Engineer with 10+ years building scalable backend systems and event-driven architectures. Expertise in Lambda (.NET), DynamoDB, SQS, EventBridge, and API Gateway, with strong foundations in REST API design and relational databases design.

Focused on resilient distributed systems, clean architecture, and high engineering standards through disciplined testing, observability, and code reviews.

CORE EXPERTISE

Cloud & Architecture

AWS, Lambda, DynamoDB, SQS, SNS, EventBridge, API Gateway, Cognito | GCP, Cloud Run | Serverless Microservices | Event-Driven Design | Idempotency & Failure Handling Patterns

Databases

DynamoDB, Relational Databases, SQL Server

Infrastructure

Infrastructure as Code, AWS SAM, CDK, CloudFormation, Terraform, CI/CD (CodePipeline, GitHub Actions)

Quality & Reliability

Unit, Integration and Automation Testing, Pull Request Reviews, DataDog Monitoring & Observability, Git

AI-Assisted Engineering

Cursor, Codex, MCP Servers, Mentored engineers on AI-assisted development workflows

Languages

C# / .NET, JavaScript / NodeJS / TypeScript, Python

PROFESSIONAL EXPERIENCE

AWS Serverless Engineer - Deckers,

Nov 2023 - Mar 2026 (2 years, 5 months), US Remote

- Built event-driven microservices and REST APIs using Lambda (.NET), DynamoDB, SQS, and EventBridge for an eCommerce platform.
- Developed payment handling system integrating multiple external payment vendors into internal order workflows, and created validation and early fraud detection systems for all supported payment instruments.
- Redesigned SQS retry flow to leverage native Lambda retry and DLQ behavior, improving resilience.
- Designed DynamoDB schema for multi-type GiftCard system aligned to optimized access patterns and atomic counter updates with conditional writes to ensure inventory consistency.
- Developed comprehensive Unit, Integration, and Automation test suites.
- Implemented structured logging and DataDog monitoring for early alerting and throughput visibility, which also helped with creation of business-facing dashboards and reports to help business decision making by non-technical users.
- Led high-standard Pull Request reviews and mentored engineers across the team.

AWS Serverless Developer - AspireHR

Aug 2022 - Jan 2023 (6 months), US Remote

- Worked on an HR onboarding platform, day-to-day tasks involved design, deployment and testing of Lambdas and APIs.
- NodeJS/TypeScript backend, with heavy use of CDK for Infrastructure as Code
- Focus on Testing, using local cloud environments as well as CI/CD pipelines with unit and automated testing

Backend Developer - Scribblr

Mar 2023 - May 2023 (3 months), UK Remote

- Short-term contract helping implement a Delivery Estimate API for an eCommerce platform.

Software Engineer - Lionheart Applications

Nov 2017 - Apr 2022 (4 years, 5 months), UK Bristol

- Designed and developed for an eCommerce platform supporting User Generated Content and customizable Inventory.
- Heavily involved in porting of the Legacy monolith codebase to a more modern distributed API-first environment.
- Utilized C# for the backend and Java/Kotlin for supporting Android Development.

Full-Stack Developer - Siemens

Aug 2015 - Aug 2016 (1 year), UK Bournemouth

- Placement during my University stay, experienced all aspects of development while working on Intelligent Parking Web App and Accessibility Enabling Pedestrian Mobile App.

PERSONAL PROJECTS

Tactical RPG Game [PC Store Page Link](#)

- Developing a PC Autobattler RPG Game to be released on PC and Switch.
- Utilizing Godot Engine and written using C#
- Implemented Serverless Backend Service for gathering play patterns for use in balancing the gameplay, written in Python using Google Cloud Run Functions

EDUCATION

BSc Computer Science, Bournemouth University, UK

Sep 2013 - Jul 2017
